## **PROJECT DETAILS:**

**Project:** SpitViper

**Client:** Elfin Cars in Australia

**Duration:** May 2013- till Date

### **Project Description:**

This is a web application that provides end to end business integration solution to our clients that enable them to Offer an UN interrupted continuous Business Vertical integration to assist the business users to maintain, monitor and Control everyday business activities. It also empowers our client to maintain an Unbreakable information transfer Channel with their customers thereby providing a positive thrust to their businesses. This application is very user-friendly For the end users and provides various advanced search options to find and track their business continuously. It contains many modules like Provision, Bartering, Score, Reserves, Finance and Blossoming and many more that makes internal information transfer and sharing an easy task for the end users of the software:

### **Roles and Responsibilities:**

As a team member, I was responsible for

- Understanding the customer's requirement.
- Understanding the manual Test cases.
- Used **Selenium WebDriver** and **core java programming** to write automation test script.
- Participated in review process of our test script.
- Involved in creating business component and generic component in my framework.
- Involved in creating Test data for my framework.
- Bug Tracking and Bug reporting using QC.
- Involved in batch Execution and Parallel Execution, and send the status report to the higher management.
- Have done debugging using eclipse IDE to test the flow of our Test Scripts.
- Follow automation life cycle rule to write and execute my Test Script.

**Project:** Briskbay

**Client:** Sears Holding Corporation

**Duration:** June 2012 to April 2013

### **Project Description:**

This is a B2c Application that enables the business owner to monitor, control, maintain and enhance his business constantly and define new business rules as suits the situation. This application is very flexible in functioning and allows the business owner to redefine business strategies at the same rate at which the business changes. It offers an opportunity for the business owner to include new schemes, offers, discounts apart from multiple options and related products to be marketed to suite the needs of his customers. The application provides many options to monitor the customers through customer groups and enhanced search options thereby making the application more user friendly to the Supervisor. The supervisor can easily maintain information about new product launches and also keep the customer posted about these products. It also can offer many subscriptions to the customer with different privileges to further enhance the customer base.

**Roles and Responsibilities:**

- Analysis of the specifications provided by the clients
- Preparation of Test Cases and test Plans.
- Used Selenium Web Testing tool for Automation
- Logging bugs in the tracking systems and monitoring status of the bugs till closure.
- Provide project related training for new members joining the team.
